

Observations from the 2010 Pennsylvania Migration Count

John Fedak and Frank Haas

Overview

Our 19th annual Pennsylvania Migration Count (PAMC) occurred on Saturday, 8 May 2010. As usual, weather was definitely a factor across the state, but birders still managed to get out and participate in observing spring migration in Pennsylvania!

Here are the numbers for 2010:

704 observers contributed
2248 field hours logged
153,429 birds tallied
219 species found
40 counties reporting

Participation was down this year. For the last few years, the report for the count has been either delayed or nonexistent, which could have contributed to the lack of participation in the count this year. However, a more definitive cause for the drop in participation this year may have been the weather.

Weather

There was some clearing in a few areas, some rain or storms in a few others; but overall, PAMC 2010 turned out to be a very windy day. In some areas, wind speeds were in excess of 25mph, with gusts as high as 45mph.

In the eastern edge of the state in *Bucks*, the calm winds of pre-dawn quickly became gale-force winds by day's end. Despite this, Diane Allison commented that the count was enjoyed.

In the center of the state at *Centre*, the day was described as "rain... then wind... then more wind... then even more wind". Nick Kerlin also commented that despite birding being difficult due to birds being "hunkered down," all observers did a great job under very difficult birding conditions.

At the western end of the state in *Greene*, Kathy Kern reported that the weather was a factor, as some of those that did participate in the count did not stay out that long. She also surmised that the warmer weather through late April moved migrants through the area, putting them well north of the county.

Speaking from experience, and feeling a little embarrassed by it, some observers did not participate due to the weather.

Participation

There were about 300 fewer birders and 1100 fewer field hours logged this year than five years ago. A variety of reasons exist for this lack of participation. The last report of the PAMC available online was 2005. With the lack of available information, interest in the state for the count may have waned a bit. That is the bad news.

The good news is that future reports should be made available both online and in print in a more timely fashion, hopefully increasing interest among birders in the state and keeping the PAMC in mind when making plans the second Saturday of May. With any luck, the 2011 count day will have good birding weather and ample participation by birders

Table 1. Top 10 counties by field hours

	County	Hours
1	Franklin	221
2	Bucks	167
3	Berks	131
4	Lancaster	123
5	Schuylkill	114
6	Westmoreland	113
7	Indiana	111
8	Bedford	103
9	Cumberland	93
10	Centre	90

Table 2. Top 10 Counties by Participants

	County	Observers
1	Franklin	67
2	Bucks	62
3	Indiana	55
4	Lancaster	44
5	Chester	34
6	Bedford	33
7	Berks	32
8	Westmoreland	30
9	Centre	27
10	Greene	25
10	Juniata	25

Species encountered

The 2010 PAMC yielded new High Counts (HC) for seven species, and tied

the high count for three others. Conversely, seven species had new low counts, and seven species counts tied their low number. Although no new species were found in 2010, since 1992, a total of about 272 species have been found on the count (not counting escapees and domestic fowl)!

Hooded Merganser, Great Cormorant, Black Vulture, Bald Eagle, Peregrine Falcon, and Blue Grosbeak were all found in record numbers. Chickadee species were also recorded as a new high number. Little Blue Heron, Sandhill Crane, and Eurasian Collared Dove all tied their old high count numbers.

However, Ruffed Grouse, Semipalmated Plover, Black-capped Chickadee, Golden-winged Warbler, Tennessee Warbler, Nashville Warbler, and Henslow's Sparrow were all counted at record lows. Northern Shoveler, Canvasback, Redhead, Northern Goshawk, Black-bellied Plover, Olive-sided Flycatcher, and Clay-colored Sparrow all tied their record lows. Undoubtedly, the record lows can be attributed to fewer participants and poor weather for much of the 2010 count day.

Once again, American Robin was the most recorded species with 13,776 individuals observed. It is interesting to note that this year, no warbler made the top 20 species. This may in part be due to the weather. Strong winds were recorded over most of the state and they could have contributed to low warbler counts.

Geese through Ducks

Canada Goose numbers were below average for PAMC counts. 6396 were counted statewide, compared to the average count of 7982 for all previous years. Mute Swan (56) was also below average, with *Berks* reporting the most swans. Fifteen species of ducks were found, with a new high count of 68 Hooded Mergansers (14 in *Dauphin*). A single Northern Shoveler was found in *Schuylkill*; a single Canvasback in *Bucks*; and a single Redhead in *Luzerne*. In general, waterfowl were found in low numbers. Exceptions were Mallard with 2293, and Wood Duck with 1037. The most woodies were found in *Juniata* (172).

Fowl through waders

Ruffed Grouse, our state bird, were at an all time low of 38. *Schuylkill* recorded almost one-third of these with 10. Only 14

counties recorded our state bird, just one-third of the counties reporting. 397 Wild Turkeys were found in 31 counties. Ten Northern Bobwhites were found, most or all of which are probably released birds.

Great Cormorant numbers were high (33), with 31 in *Chester* and 2 in *Bucks*. Two Yellow-crowned Night-Herons were found in *Cumberland* and one Snowy Egret was seen in *Bedford*.

Vultures, raptors

Although Mississippi Kites were starting to become regular in the southeast earlier this decade, no kites were located this year. Black Vultures turned up in new high numbers with a total of 465 reported, 229 of which were found in *Lancaster*. Bald Eagles are also continuing to increase with 146 found in 26 counties, 49 in *Lancaster* alone. Only 14 Northern Harriers were found, and only one Northern Goshawk was located. *Wyoming* had 3 of the harriers and *Bradford* turned up the lone goshawk.

Falcons were in evidence this year with 156 American Kestrels found, which is below the count average of 1995. Surprisingly, only two Merlins were found. For a species now confirmed breeding in the state, this seems like a low number, until one considers the counties represented in this year's count; *McKean* and *Warren*, where breeding Merlins can be found, did not report this year. Peregrine Falcons however, were recorded in all time high numbers: 22 total, of which 7 were reported in *Bucks*.

Rails and shorebirds

Seven Sandhill Cranes in *Sullivan* tied the high count. Once again, *Lawrence*, where Sandhill Cranes are more likely to be found, did not submit a report. Seven American Coots were seen in six different counties. Sixteen Virginia Rails were found in four counties, seven of which were located in *Bucks*. *Bucks* and *Lebanon* tied at three Soras apiece, combining for half of the 12 found statewide.

Shorebirds seemed low overall with only 144 species reported for the count. Only one Black-bellied Plover was found, and a low of only 11 Semipalmated Plovers were located. 542 Killdeer were located in 37 of the 40 reporting counties and 491 Spotted Sandpipers were reported in 32 of the 40 counties. *Bedford* reported five shorebird high counts. There was no report from *Erie*. It would be interesting to see if Presque Isle would have turned up any more numbers with the higher winds of the day.

Gulls and terns

A total of 1561 Laughing Gulls were found with 1534 in *Bucks*. Ring-billed Gulls Beat that with 1568, 1065 of which were located in *Lancaster*. Four tern species (Caspian, Common, Forster's, and Black) were found. All four were reported in *Lancaster*, and the high counts of three of the four species were so found in *Lancaster*. Three of the 9 Caspian Terns were located in *Lebanon*, while 58 out of 103 Common Terns, 11 out of 30 Forster's Terns, and 6 out of 8 Black Terns were in *Lancaster*.

Doves through nightjars

Eurasian Collared-Dove was reported only from *Franklin* where 44 individuals were found. Mourning Doves were reported in 39 of the 40 reporting counties. Cuckoo numbers seemed a little low with 64 Yellow-billed Cuckoos reported—14 in *Franklin*. Twenty Black-billed Cuckoos were found in 13 counties with 3 reported in *Juniata*.

Two Barn Owls were reported from *Centre* and *Lebanon*. It was not reported from Counties where the birds can usually be found. Eastern Screech, Great-horned and Barred Owls were reported in lower numbers than average. No Northern Saw-whet Owls were reported for the count.

Swifts through swallows

Bedford County reported 44 of this year's 255 Ruby-throated Hummingbirds. The number fell far below average for the PAMC. Only 140 Belted Kingfishers were reported, with 13 from *Lancaster*. *Bucks* reported 138 of the 1012 Red-bellied Woodpeckers. Only 21 Yellow-bellied Sapsuckers were reported, with 5 each from *Wayne* and *Wyoming* counties.

Greene and *Lehigh* each reported a single Olive-sided Flycatcher, to tie the low count for that species. One Yellow-bellied Flycatcher (in *York*) was reported on the count. Nine Philadelphia Vireos were found in three counties, with 7 being reported from *Juniata*.

Sixty-three of the 307 Fish Crows were reported from *Cumberland*. Considering that 128 ravens were reported from *Potter* alone in 2003, 117 Common Ravens statewide does not seem like a very high number. Eighteen of the ravens were reported from *Juniata*.

Chickadees through waxwings

The number of "chickadee sp." has risen in recent counts to a high of 219 this year. It is interesting to think this may be due to the northward advancing of the Carolina Chickadee and its hybridization with Black-capped Chickadees. 517

Carolina Chickadees were reported with 123 in *Bucks*; 677 Black-capped Chickadees were reported with 99 in *Indiana*. This represents a new low count for Black-capped Chickadees. Was it due to hybridization or was it due to the smaller number of participants this year?

Only 12 Winter Wrens were located, with 5 in *Westmoreland*. *Philadelphia* accounted for 9 out of the 10 Marsh Wrens found during the count. 7776 Carolina Wrens was above the count average, but lower than the last 10 year average.

Bucks found one half of the state's 6 Gray-cheeked Thrushes. American Robin numbers were higher than in 2009 with 13,776, but only slightly above the PAMC average. American Pipits were found in five counties with 83 of the 128 located in *Juniata*. European Starling numbers fell below the PAMC average in 2010 with only 9215 birds found.

Warblers

Warbler numbers were very low. Golden-winged, Tennessee and Nashville Warblers all set record lows. Seven of the 16 Golden-winged Warblers were reported from *Centre*. Seven of the 18 Tennessee Warblers were found in *Indiana*. Nine Nashville Warblers were found in *Centre* and *Westmoreland*, about half of the 38 statewide. *Perry* had 44 of the 168 Blackburnian Warblers and shared in the total of 2 Mourning Warblers with *Juniata*. The total number of species was good: 35 warbler species were reported across the state, but none were in very high numbers. Yellow Warblers and Common Yellowthroat did not even make the top twenty species, with just 2074 and 2162 found respectively. Mix in some wind on count day and the neck-straining warblers must become harder to find!

Tanagers through cardinal

Once again on count day, no Summer Tanagers were found. It has been missed in 3 of the past 5 counts. The lone Clay-colored Sparrow was found in *Northampton*. Twelve of 15 American Tree Sparrows were found in *Bedford*. The lone Henslow's Sparrow was found in *Indiana* County. Only 87 Dark-eyed Juncos were located, 13 in *Bradford*, well below the averages for recent counts and PAMC history.

A new high count of 40 was set for Blue Grosbeak! Twenty-nine individuals were found in *Bedford* and it was recorded in four counties.

Blackbirds through finches

A total of 558 Bobolinks were

reported in 27 counties, with 82 found in *Wyoming*. Thirty-four Rusty Blackbirds, a species of concern, were reported in five counties, 20 of them in *Bedford*. Baltimore Orioles were found in 38 of the 40 reporting counties with a total of 2666.

House Finch numbers remain well below the previous 5 year average with 1101. Both American Goldfinch and House Sparrow remained below average.

Table 3. Top 20 most abundant species

1	American Robin	13776
2	European Starling	9215
3	Red-winged Blackbird	8122
4	Common Grackle	7738
5	Canada Goose	6396
6	Barn Swallow	5100
7	Gray Catbird	4837
8	Tree Swallow	4651
9	American Crow	4630
10	Northern Cardinal	3246
11	House Sparrow	3145
12	Mourning Dove	3087
13	Red-eyed Vireo	3082
14	Blue Jay	3055
15	American Goldfinch	2934
16	Baltimore Oriole	2666
17	Song Sparrow	2509
18	Chipping Sparrow	2404
19	Mallard	2293
20	Turkey Vulture	2225

The PAMC Future

The Pennsylvania Migration Count has been the topic of much discussion recently. This year the numbers of participants were slightly lower than the PAMC/NAMC history. Was this a factor due to weather? I would like to think so. In recent years, little has been reported about the count for various reasons. Perhaps it has slipped the minds of local birders. However, stronghold counties are still participating with the vigor of old—a good and hopefully indicative factor.

The information gained through the count is still as valuable as it ever was. This year an effort was made to get the results of the count out promptly. As happens often with good intentions, promptly doesn't happen as fast as it should or as fast as we wanted it to occur. I sit here finishing up the written report in November. I wanted to be done at the end of summer.

I went into this venture expecting it to be easy. I was very wrong. This is a task that is difficult for even two people undertaking it. It is my hope that future reports be completed sooner and in more detail. It will still be a hard task, but with the experience of working on this report, I

think I can do better next season.

With that being said, I hope you make it harder for me with more participation from more people in more counties and seeing more individuals of more species of birds!

Summary

Looking at this report with only 40 of 67 counties reporting, and knowing that most of the northern tier was not represented, I am hoping for more participation from birders and bird clubs in the future. This count has really taken off in Pennsylvania. We have almost two decades of data that can be used to locally map environmental changes in species and in migration. Personally, I think we should make an effort to increase participation. I fervently hope to see 67 counties participating next year!

Thanks go out to all the participants this year that braved a sometimes wet and mostly windy day to collect data. I look forward to seeing all of you collecting more data next year.

Please note that the 2011 count will take place on May 14. Mark your calendars now!
