Class V-C

Comments: Clearly an adult Long-billed in pre-basic molt. There is a lot of black in the mantle, scapulars & coverts, more than a Short-billed would show & the flanks are heavily barred as are the undertail coverts. Short-billed has less barring & more spotting in these areas

Comments: THIS BIRD IS AN ADULT IN WORN ADEQUATE
 DEFENSIVE PLUMAGE. NOTE ~~THE~~ HEAVILY BARRED
 FLANKS WITH HEAVY BARREN OR CHEVRONS ON THE
 UNDERTAIL COVERTS WITH ORANGE EXTENDING TO BELLY
 AND UNDERTAIL COVERTS.

- L. GRISEUS IS HEAVILY BARRED ON THE FLANKS, BUT
 ORANGE NOT EXTENDING TO BELLY AND UNDERTAIL COVERTS
- L. HENDERSONII IS ENTIRELY ORANGE ON THE
 UNDERPARTS, BUT ^{WITH} LITTLE IF ANY BARREN, MOSTLY
 SPOTS.
- L. CAURLINGI IS SOLID WHITE ON BELLY AND UNDER-
 TAIL COVERTS.

IT WOULD HAVE BEEN NICE TO HAVE A WRITTEN
 DESCRIPTION WITH THIS SLIDE.

Comments: A photo with no comments! Did he hear the bird? Extremely early for a juvenile Long-billed. The grey head suggest a Long-billed but the back is not chestnut enough for me. It really look like an adult bird in molt.

I cannot satisfactorily identify this bird from this slide alone. For these reasons I have to vote Class V-B. This is no reflection on the observer, just that the slide is inadequate.
