360-65-2003

Nick and Deuane,

I'm a bit behind schedule in forwarding this, but thought you would be interested -- particularly since this Sabine's was a week or 2 before the big hurricane!

I'll send a printed copy to the Mifflin Co compiler -- All the info I got from the rehabber is below.

PS -- I didn't label the images, just to confirm that I'm not thaaat far gone. Also, the bird died in rehab, and the specimen is at the PGC headquarters - and I intend to get it to the ANSP.

Sincerely,

Daniel W. Brauning
 570-547-6938

The Bird was found 9/6 in McVeytown in the middle of US Highway 522S by Junior B. Norton from McVeytown: 717-899-7290. The bird was taken to Debbie Henry in Mifflintown (a licensed rehabber). She brought it to me on 9/8. The bird was found dead on 9/11.

Robyn

Subject: What am I?

Greeting all,

Can you tell me what kind of bird this is?
 It weighs 104 grams but is very emaciated.
 I am guessing it should weigh 150-200 grams.
 It is about 10-12 inches long. The closest that I can find in the bird book is a juvenile black tern.

Any help would be greatly appreciated!

BTW, it is in very bad shape and I don't expect

12/31/2003

it to make it...but I have it in an incubator right now and I am starting it on fluids and emaciation protocol.

Robyn
