

Hi

Here are a few pictures for the PA Records Committee of two Arctic Terns that were present on May 22, 2012 around 5PM until 5:30PM, when Sharon and I left, at Elk State Park in Elk County, Pa. There were two birds present the entire time that I was there (approx 30 minutes). The birds were fishing the entire time but I couldn't get photos of the birds together. The birds were a grayish color on the upper wings, gray on the breast area, the tips of the primaries had a thin trailing edge of black on the undersides, the bill was short and the neck was thick and short.
