Submission Date 2012-10-30 21:14:50 Chris Blazo **Observer's Name** E-mail cblazo@localnet.com **Observer's Address** City: St. Thomas State / Province: PA Postal / Zip Code: 17202 Country: United States Names of additional observers Bill Oyler, Laurie? **Black Skimmer Species (Common Name) Species (Scientific Name)** Rynchops niger Subspecies (if known) niger Number of individuals 4 Have you submitted this to Yes eBird? Age(s) and Plumage(s) and Sex They were all juveniles. (if known) **Observation Date and Time** 10-30-2012 5:00 PM Franklin County Location (City, Borough, Hamilton Township Township) Exact Site (E.g. Name of park, Back Creek off of Edgewater Dr. lake, road) **Habitat** A very large flooded pasture with a mature Oak grove to the southern border along Back Creek. Distance to bird 250' Viewing conditions Overcast. Drizzle. Breezy. Optical equipment used Nikon 8x42 **Description** They were juveniles. They were more towards the adult black plumage, not the brown juvenile plumage. There was some scaling on the wings with whitish feather fringes. The diagnostic bill with the lower mandible and orange base was obvious. It's dark cap

Behavior (be as detailed as possible about what the bird was doing)These four birds did not do much. They stood horizontal and sometimes tucked their bill into their back. They never took flight or walked.

continued down nape to mantle, unlike adult. While

standing, it was very horizontal.

Separation from similar species (How you eliminated others)

The bill was the factor.

Discussion - anything else relevant to the observation that will aid the committee in evaluating it:

There were so many rare birds I saw today. I was on cloud 9. Hurricane Sandy gave me some of my best birding in over 25 years.

Are you positive of your identification? (Why or why not)

I am positive. I know these birds from watching them in North Carolina. Plus they are unmistakable for an experienced birder.
